PLUMBING ANTIFREEZE **MAX**

BURST PROTECTION **-100°F***

Plumbing Antifreeze MAX prevents damage to drains and freshwater lines caused by freezing water in seasonal homes, cottages, chalets, mobile homes, recreational vehicles, boats, septic systems and swimming pool filtration and heating systems.

THIS PRODUCT IS NOT DESIGNED AS A HEAT TRANSFER FLUID FOR CLOSED LOOP SYSTEMS OR AS ANTIFREEZE FOR INTERNAL COMBUSTION ENGINES.

*Freezing of the product is normal and will not damage equipment.

WARNING: DO NOT DILUTE. Any water remaining in the lines and drains will cause the product to expand and damage water lines. Bring product to room temperature before using.

DIRECTIONS:

1. Drain water system **COMPLETELY**.
2. Pour product into freshwater lines through the pressurization system or by removing faucet stems. For recreational vehicles, see your owner's manual for further details.
3. Add antifreeze until color is evident at drain points. Make sure all branch pipes are treated.
4. For a seasonal home, also add 35.2 fl oz (1L) to each toilet bowl and toilet tank and 8.8 fl oz (250 mL) to all sink and tub traps. For fresh water systems piping must be thoroughly flushed before returning to service.

**Salt solutions known as brines are extremely corrosive to metals and cannot be rendered non-corrosive.
